            ;2488  .PAGE
            ;2489  .TOC     Find MS780-E Memory'
            ;2490 ;++
            ;2491 ; FUNCTIONAL DESCRIPTION:
            ;2492 ;
            ;2493 ;          The diagnostic is designed to handle up to 4 (four)
            ;2494 ;     MS780-E/H's on the 780 SBI. This routine looks at all TR levels
            ;2495 ;     for a MS780-E memory unit.  Upon return, ID registers 3A through
            ;2496 ;     3D will hold the I/O base address of the MS780-E subsystems found
            ;2497 ;     on the SBI, and ID Register 3E will hold the Total number of
            ;2498 ;     MS780-E/H's found minus one. Also, it is to be noted that the
            ;2499 ;     first MS780-E found will have its starting address set to 0
            ;2500 ;     (zero).
            ;2501 ;     All the other MS780-E/H's found will have their starting address
            ;2502 ;     set to all ones. Subroutine ENABLE.NEXT.MS780E will look at ID
            ;2503 ;     Reg 3E to decide if there are any more MS780-E and will take
            ;2504 ;     apropriate action.  Register RC[0E] is used as a pointer to the
            ;2505 ;     current MS780-E unit under test.
            ;2506 ;     If any of: MS780-A, MS780-C or MA780 is found, its address is
            ;2507 ;     set to maximum.
            ;2508 ;
            ;2509 ; CALLING CONSTRAINT:
            ;2510 ;
            ;2511 ; =00
            ;2512 ;
            ;2513 ; OUTPUTS:
            ;2514 ;
            ;2515 ; rc[0e] - Contains address of Configuration Register
            ;2516 ; r[0]  - Contains TR level
            ;2517 ;
            ;2518 ; SIDE EFFECTS:
            ;2519 ;
            ;2520 ; D register is destroyed.
            ;2521 ;--

            ;2766  .PAGE
            ;2767  .TOC     ENABLE NEXT MS780-E
            ;2768 ;++
            ;2769 ; FUNCTIONAL DESCRIPTION:
            ;2770 ;
            ;2771 ;          This diagnostic will  be able to handle up  to  four  MS780-E units.
            ;2772 ;    They will be tested  separately, according to the TR level at which
            ;2773 ;    they are located,  starting with the one  at the lowest level first.
            ;2774 ;          When  a test has finished  with the first unit, it will have to call
            ;2775 ;    this specific  routine  to see  if any other MS780-E unit is present
            ;2776 ;    on the SBI. If more units are  present, the first one  will be  dis-
            ;2777 ;    abled  by  setting  its  starting  address to maximum, the next unit
            ;2778 ;    will be  enabled  by  setting its starting address to 0 and the test
            ;2779 ;    will be restarted. Subroutine  FIND.MS780E  will  look  on  the  SBI
            ;2780 ;    for  MS780-E/H  subsystems, and will leave their I/O base address in
            ;2781 ;    ID registers 3A through 3D and  a count of the Total number of units
            ;2782 ;    found - 1 in register 3E. In this subroutine the SC register is used
            ;2783 ;    as  a  pointer  to  ID  registers 3A through 3D.

;2961 ; TEST 1F5 CPU AND NEXUS SBI FAULT TESTS
;2962 ;
;2963 ;
;2964 ; TEST DISCRIPTION
;2965 ;
;2966 ; THIS TEST CHECKS NEXUS'S SBI FAULT DETECTION LOGIC.
;2967 ; THE FOLLOWING FAULTS WILL BE CHECKED FOR:
;2968 ;
;2969 ;  1) P0 PARITY ERROR (WRITE CYCLE)
;2970 ;  2) P1 PARITY ERROR (WRITE CYCLE)
;2971 ;  3) MULTIPLE XMITTER ON BUS (WRITE CYCLE)
;2972 ;  4) WRITE DATA SEQUENCE FAULT
;2973 ;  5) INTERLOCK COMMAND SEQUENCE FAULT(UBA ONLY)
;2974 ;
;2975 ; THE DATA USE UNDER THE FAULT CONDITIONS WILL
;2976 ; NOT BE SHIFT OR FLOATED (AS IN A TEST FOR DATA
;2977 ; INDEPENDENCE).  ONLY THE PARITY WILL BE
;2978 ; REVERSED (AT THE CPU) OR MAINTENANCE I.D
;2979 ; USED.  THE MAINTAINENCE I.D WILL BE PART
;2980 ; OF THE FORCE FAULT CONSTANTS (RA1-4).
;2981 ;
;2982 ; EACH TEST WILL CHECK TO SEE THE SBI FAULT
;2983 ; BIT CLEARED ON THE CPU DEASSERTION OF FAULT.
;2984 ; THE FAULT WILL BE CHECKED IN THE CPU MAINTENANCE
;2985 ; REGISTER AS WELL AS THE NEXUS CONFIGURATION
;2986 ; REGISTER.

;1811 ; MODULE NAME: ESKAR59
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;

            ;1844   .TOC      Micro Trap Handler
            ;1845 ;**
            ;1846 ; FUNCTIONAL DESCRIPTION:
            ;1847 ;
            ;1848 ; This routine is responsible for 'catching' micro-traps
            ;1849 ; and reporting unexpected traps to the Monitor. Register R[0F]
            ;1850 ; contains the Trap-Expected Mask. If the specified bit is set in
            ;1851 ; the mask, the bit is cleared and a RETURN0 is made otherwise,
            ;1852 ; an error call is made.
            ;1853 ;
            ;1854 ; INPUT PARAMETERS:
            ;1855 ;
            ;1856 ; R[0F] - Expected Trap Mask
            ;1857 ;  Trap Code Function
            ;1858 ;  ---------      --------
            ;1859 ;       0  System Init
            ;1860 ;       1  Data Unaligned
            ;1861 ;       2  Cross Page
            ;1862 ;       3  TB Modify
            ;1863 ;       4  TB Protection
            ;1864 ;       6  TB Miss
            ;1865 ;       7  TB Parity
            ;1866 ;       8  Cache Parity
            ;1867 ;       9  Reserved Floating Operand
            ;1868 ;       C  Read Data Substitute
            ;1869 ;       D  Time out
            ;1870 ;       F  Control Store Parity Error
            ;1871 ;      10  Odd Address
            ;1872 ;
            ;1873 ; OUTPUT PARAMETERS:
            ;1874 ;
            ;1875 ; R[0F] - Mask bit is cleared.
            ;1876 ;

            ;1926 ;++
            ;1927 ; FUNCTIONAL DESCRIPTION:
            ;1928 ;
            ;1929 ; This routine Initializes the following registers:
            ;1930 ;  PSL    to 1F
            ;1931 ;  CES    to 0
            ;1932 ;  ACC.CS   to disable accellerator
            ;1933 ;  SIR    to 0
            ;1934 ;  CLK.CS   to stop interval timer
            ;1935 ;  TBER0   to disable the TB
            ;1936 ;  SBI.MAINT to    0
            ;1937 ;  SBI.ERR   to 0
            ;1938 ;  FAULT   to 0
            ;1939 ;  COMP    to 0
            ;1940 ;  RC[0E]   to  0
            ;1941 ;  R[0F]   to 0
            ;1942 ; It also performs an SBI UNJAM and disables the CACHE.
            ;1943 ; A SCOPE call is then made to the Monitor.
            ;1944 ;

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR5A
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:

;1840
```

```
            ;1841  .PAGE
            ;1842
            ;1843 .TOC "MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES"
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A "TB MISS" MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

            ;2778 ;*****************************************************************
            ;2779 ;**
            ;2780 ; UBREAK REGISTER AND SYNC TEST
            ;2781 ;
            ;2782 ; TEST DESCRIPTION
            ;2783 ;  THIS IS A TEST OF THE MICRO BREAK REGISTER AND OF
            ;2784 ;  THE COMPARATORS WHICH GENERATE THE SYNC ON MATCH.
            ;2785 ;  THIS COMPARATOR IS TESTED TO INSURE NOT ONLY
            ;2786 ;  VALID MATCHES BUT ALSO VALID MISMATCHES. TEST ADDRESSES
            ;2787 ;  ARE GENERATED BY FLOATING A 1 ACROSS 0'S.
            ;2788 ;  THE TEST SEQUENCE FOR EACH TEST PATTERN IS THEN:
            ;2789 ;   1 WRITE THE PATTERN INTO UBREAK REG.
            ;2790 ;   2 EXECUTE LOCATION 0 WITH NO SYNC
            ;2791 ;   3 EXECUTE THE LOCATION ADDRESSED BY
            ;2792 ;     THE PATTERN AND GET A SYNC
            ;2793 ;   4 WRITE 0 INTO THE UBREAK REG.
            ;2794 ;   5 EXECUTE THE LOCATION ADDRESSED BY
            ;2795 ;     BY THE TEST PATTERN WITH NO SYNC
            ;2796 ;   6 EXECUTE LOCATION 0 AND GET A SYNC.

;1809  ;
;1810  ;
;1811  ; MODULE NAME: ESKAR5B
;1812  ;
;1813  ; CREATION DATE:  SEPTEMBER 1982
;1814  ; AUTHOR:  DAN GRIGORE
;1815  ;
;1816  ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817  ;
;1818  ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819  ;
;1820  ; -  WHAT CHANGE WAS MADE
;1821  ;
;1822  ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823  ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824  ;
;1825  ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826  ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827  ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828  ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829  ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830  ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831  ;    ESKAR3C.
;1832  ;
;1833  ; START OF REVISION HISTORY:
;1834  ;
;1835  ;
;1836  ;
;1837  ;
;1838  ;

            ;1841  .PAGE
            ;1842
            ;1843 .TOC "MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES"
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A "TB MISS" MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR5C
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;

            ;1842
            ;1843  .TOC "MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES"
            ;1844 ;+
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A "TB MISS" MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR5D
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:

```
            ;1841   .PAGE
            ;1842
            ;1843   .TOC "MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES"
            ;1844 ;+
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A "TB MISS" MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR5E
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:

```
            ;1841   .PAGE
            ;1842
            ;1843   .TOC  MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A  TB MISS' MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

            ;2232 ;++
            ;2233 ; EALU/A+B TEST
            ;2234 ;
            ;2235 ; TEST DESCRIPTION
            ;2236 ; THIS IS A TEST OF THE EALU FUNCTION A+B. EVERY POSSIBLE
            ;2237 ; COMBINATION OF A OPERANDS WITH B OPERANDS IS TRIED. THE
            ;2238 ; RESULT IS CHECKED IN TWO WAYS:
            ;2239 ;  1 IF THE RESULT WAS AN OVERFLOW (BIT 8 OF THE
            ;2240 ;    EALU IS SET) THE RESULT IS STORED IN THE XR.
            ;2241 ;    THE BUS SHOULD BE FORCED TO 0'S BECAUSE OF
            ;2242 ;    EALU<8>=1. THEN THE ACTUAL RESULT
            ;2243 ;    OF THE ADDITION IS TESTED BY READING THE XR
            ;2244 ;    BACK THROUGH THE EALU.
            ;2245 ;  2 IF THE RESULT WAS NOT OVERFLOW THEN IT IS
            ;2246 ;    READ BACK DIRECTLY ONTO THE BUS AND CHECKED.

            ;2340  .PAGE ' TEST 264 EALU/A-B TEST
            ;2341 ;*****************************************************************
            ;2342 ;++
            ;2343 ; EALU/A-B TEST
            ;2344 ;
            ;2345 ; TEST DESCRIPTION
            ;2346 ; THIS IS A TEST OF THE EALU FUNCTION A-B. EVERY POSSIBLE
            ;2347 ; COMBINATION OF A OPERANDS WITH B OPERANDS IS TRIED. THE
            ;2348 ; RESULT IS CHECKED IN TWO WAYS:
            ;2349 ;  1 IF THE RESULT WAS AN UNDERFLOW (BIT 8 OF THE
            ;2350 ;    EALU IS SET) THE RESULT IS STORED IN THE XR.
            ;2351 ;    THE BUS SHOULD BE FORCED TO 0'S BECAUSE OF
            ;2352 ;    EALU<8>=1. THEN THE ACTUAL RESULT
            ;2353 ;    OF THE ADDITION IS TESTED BY READING THE XR
            ;2354 ;    BACK THROUGH THE EALU.
            ;2355 ;  2 IF THE RESULT WAS NOT UNDERFLOW THEN IT IS
            ;2356 ;    READ BACK DIRECTLY ONTO THE BUS AND CHECKED.

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR5F
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:

```
            ;1841   .PAGE
            ;1842
            ;1843   .TOC "MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES"
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A "TB MISS" MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR60
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:

            ;1841   .PAGE
            ;1842
            ;1843   .TOC  MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A  TB MISS  MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;2644 ; TEST FPA ERROR LATCH AND CPU BEN/6.
;2645 ;
;2646 ; TEST DESCRIPTION
;2647 ;
;2648 ; THIS TEST EXERCISES THE LOGIC THAT SETS AND RESETS THE
;2649 ; FPA ERRPR LATCH. THE LATCH IS VERIFIED BY CHECKING THE FPA
;2650 ; STATUS REGISTER BIT 31 (ERROR SUMMARY) AND BIT 27 (RSV OPERAND)
;2651 ; THE CPU BEN/6 BRANCH CONDITIONS ARE ALSO TESTED.

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR61
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;

            ;1841   .PAGE
            ;1842
            ;1843   .TOC 'MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A 'TB MISS' MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR62
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:

```
            ;1841   .PAGE
            ;1842
            ;1843   .TOC  MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A  TB MISS  MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;2481 ; TEST SIGN LOGIC FOR ADD/SUB WITH LA=LB
;2482 ;
;2483 ; TEST DESCRIPTION
;2484 ;
;2485 ; THE SIGN DECISION LOGIC FOR ADD AND SUBTRACT WITH
;2486 ; LA=LB, IS CHECKED IN THIS TEST. THE RESULTING SIGN
;2487 ; OUTPUT IS  CHECKED  WITH  ONLY THE  REQUIRED INPUT
;2488 ; AND SIGN MUX SELECT TO THE SIGN OUT PUT MUX ASSERTED.
;2489 ; THEN ALL POSSIBLE COMBINATIONS OF SIGN INPUT AND MUX
;2490 ; SELECT ARE ASSERTED, AND THE SIGN OUT PUT VERIFIED.
;2491 ; POLYADDL IS VERIFIED NOT STUCK AT (0).
;2492 ;
;2493 ; THE RESULT NEGATIVE INPUT IS GENERATED BY LOADING
;2494 ; THE FAD AR AND BR LATCHES WITH AR>BR, ASSERTING
;2495 ; AN ADD OPCODE, AND MAKING THE OPERAND SIGNS
;2496 ; DIFFERENT.

;2779  .PAGE  TEST 282 SIGN LOGIC FOR ADD/SUB WITH LA<LB
;2780 ;*****************************************************************
;2781 ;**
;2782 ; TEST SIGN LOGIC FOR ADD/SUB WITH LA<LB
;2783 ;
;2784 ; TEST DESCRIPTION
;2785 ;
;2786 ; THE SIGN DECISION LOGIC FOR ADD AND SUBTRACT WITH
;2787 ; LA<LB IS EXERCISED IN THIS TEST. THE RESULTING SIGN
;2788 ; OUTPUT IS CHECKED WITH  ONLY THE  REQUIRED INPUT
;2789 ; AND SIGN MUX SELECT TO THE SIGN OUT PUT MUX ASSERTED.
;2790 ; THEN ALL POSSIBLE COMBINATIONS OF SIGN INPUT AND MUX
;2791 ; SELECT ARE ASSERTED, AND THE SIGN OUT PUT VERIFIED.
;2792 ;

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR63
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:
;1834 ;

```
            ;1841   .PAGE
            ;1842
            ;1843   .TOC 'MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A 'TB MISS' MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;2492 ; NORMALIZER ROM TEST (2)
;2493 ;
;2494 ; TEST DESCRIPTION
;2495 ;
;2496 ; THIS TEST USES (128) OPERANDS TO TEST NORMALIZER ROM LOCATIONS
;2497 ; <B0:DF>,<38:70>. THE DATA TABLE AT THE END OF THIS TEST CONTAINS
;2498 ; (64) OPERANDS. THE ADDITIONAL (64) ARE IDENTICAL TO THE DATA
;2499 ;  TABLE EXCEPT THAT THE THE CONTENTS OF AR1 AND BR1 ARE SWAPPED.
;2500 ; THE RESULTS OF THE (64) OPERATIONSIS A REPETETIVE PATTERN OF (8)
;2501 ; QUAD WORDS. FOR EXAMPLE, THE FIRST (8) OPERATIONS YIELD THE (8)
;2502 ; RESULTS IN THE TABLE. THE THE NEXT (8) OPERATIONS YIELD THE SAME
;2503 ; (8) RESULT PATTERNS. THIS SEQUENCE IS REPEATED UNTILL (64)
;2504 ; OPERATIONS ARE COMPLETED. THE NEXT (64) OPERATIONS REPEAT THE ABOVE
;2505 ; MENTIONED SEQUENCE.

;1808 ;*****************************************************************************
;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR64
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.

            ;1841   .PAGE
            ;1842
            ;1843   .TOC  'MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A  TB MISS" MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;2216  .PAGE  TEST 291 VERIFY DIVIDE STATES FOR FLOAT AND DOUBLE
;2217 ;*****************************************************************
;2218 ;**
;2219 ; VERIFY DIVIDE STATES FOR FLOAT AND DOUBLE
;2220 ;
;2221 ; TEST DESCRIPTION
;2222 ;
;2223 ; THIS TEST DOES A SINGLE PRECISION  AND A DOUBLE
;2224 ; PRECISION DIVIDE. FIFTEEN STATES AFTER THE START
;2225 ; OF THE DIVIDE, THIRTY FOR DOUBLE PRECISION,THE FPA
;2226 ; MAINTENANCE REGISTER NEXT ADDRESS IS READ. THE NEXT
;2227 ; ADDRESS DETERMINES IF DIVIDE DONE HAS OCCURRED IN
;2228 ; THE REQUIRED NUMBER OF STATES. THIS TEST VERIFIES
;2229 ; THAT THE DIVIDE LOGIC ON THE FNM MODULE ,AND THE
;2230 ; TEMP/LSH REGISTERS ON THE FML MODULE CAN DEVELOP THE
;2231 ; QUOTIENT IN THE REQUIRED NUMBER OF STATES.

;3110 ;**
;3111 ; TEST FOR NALU CARRY PROPAGATE FAULTS
;3112 ;
;3113 ; TEST DESCRIPTION
;3114 ;
;3115 ; THE REMAINDER MOST SIGNIFICANT (8) BITS AND THE
;3116 ; NORMALIZER REGISTER (8) MOST SIGNIFICANT BITS ARE
;3117 ; SELECTED SO THAT WHEN DIVIDED, A CARRY GENERATE
;3118 ; FROM THE LOW (4) BITS WILL PROPAGATE THROUGH
;3119 ; THE HIGH (4) BITS. THIS PATTERN IS THEN SHIFTED
;3120 ; RIGHT (4) BITS AND THE TEST IS REPEATED. THIS
;3121 ; SEQUENCE CONTINUES UNTILL THE PATTERN RESIDES IN
;3122 ; THE LEAST SIGNIFICANT BYTE OF BOTH REGISTERS.
;3123 ; CARRY PROAGATE FAULTS ARE DETECTED BY THIS
;3124 ; PATTERN.
;3125 ;
;3126 ; TEST SEQUENCE   DESCRIPTION
;3127 ;
;3128 ; 1  INITIALIZE WORD COUNT AND STARTING ADDRESS
;3129 ; 2  FETCH THE DIVIDEND AND DIVISOR
;3130 ; 3  PERFORM THE DIVIDE
;3131 ; 4  VERIFY RESULTS
;3132 ;

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR65
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:

            ;1841   .PAGE
            ;1842
            ;1843   .TOC  MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES
            ;1844 ;+
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A 'TB MISS' MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;2338 ; TEST DESCRIPTION
;2339 ;
;2340 ; THIS TEST DOES A 32 BIT MULTIPLY WITH THE MULTIPLIER (MP0)
;2341 ; AND THE MULTIPLICAND INTEGER (MCI) CONTAING ZEROS. THE (MCI)
;2342 ; AND MP0 ARE THEN RE-INITIALIZED WITH (MP0) CONTAINING A
;2343 ; FLOATING ONE PATTERN AND THE MCI CONTAINING THE LSB ASSERTED.
;2344 ; UPON  COMPLETION THE TEST REVERSES THE DATA IN THE MP0 AND
;2345 ; MCI AND REPEATS THE OPERATION .THE RESULTANT PRODUCT FLOATS A
;2346 ; ONE THROUGH THE LO HALF OF THE INTEGER PRODUCT REGISTER.

;1809 ;
;1810 ;
;1811 ; MODULE NAME: ESKAR66
;1812 ;
;1813 ; CREATION DATE:  SEPTEMBER 1982
;1814 ; AUTHOR:  DAN GRIGORE
;1815 ;
;1816 ; PLEASE INCLUDE DETAILED DESCRIPTION ON THE FOLLOWING ITEMS:
;1817 ;
;1818 ; -  TEST NUMBER ON WHICH CHANGES WERE MADE
;1819 ;
;1820 ; -  WHAT CHANGE WAS MADE
;1821 ;
;1822 ; -  WHY WAS THE CHANGE MADE (INCLUDE DATA ON THE AIDS REPORT
;1823 ;    THAT PROMPTED THE CHANGE IF APLICABLE)
;1824 ;
;1825 ; -  EDIT NUMBER (SEE ESKAR3C FOR MORE DETAILS ON THIS)
;1826 ;    NOTE:  THE EDIT NUMBER IN THIS MODULE HEADER MUST
;1827 ;           MATCH  THE  EDIT  NUMBER FOR THE CHANGE IN
;1828 ;    ESKAR3C).   MAKE SURE  THAT WHEN  MAKING A
;1829 ;    CHANGE  ALL  THE  INFORMATION  REQUIRED IS
;1830 ;    INCLUDED BOTH IN  THE MODULE HEADER AND IN
;1831 ;    ESKAR3C.
;1832 ;
;1833 ; START OF REVISION HISTORY:

            ;1841   .PAGE
            ;1842
            ;1843   .TOC  MICRO TRAP HANDLER AND LSI-MONITER CALL ROUTINES
            ;1844 ;*
            ;1845 ; FOLLOWING ARE THE MICRO TRAP VECTOR ASSIGNMENTS. EACH VECTOR LOADS THE SC
            ;1846 ; WITH A NUMBER, AND LOADS THE D REGISTER WITH THE CONTENTS OF R[0F].
            ;1847 ; R[0F] IS SETUP BY THE PROGRAM TO INDICATE WHETHER A MICRO TRAP IS EXPECTED
            ;1848 ; THIS IS DONE BY SETTING THE BIT IN R[0F] THAT CORRESPONDS TO THE NUMBER
            ;1849 ; THAT IS LOADED INTO THE SC BY THAT PARTICULAR MICRO TRAP.
            ;1850 ;
            ;1851 ; FOR EXAMPLE: IF A TEST EXPECTED A  TB MISS  MICRO TRAP IT WOULD SET BIT
            ;1852 ; 6 IN SCRATCH PAD R[0F]. WHEN THE TRAP OCCURRED, THE TRAP CATCHER
            ;1853 ; ROUTINE WOULD SENSE THAT THE TRAP WAS EXPECTED AND CLEAR BIT 6 IN
            ;1854 ; R[0F] AND DO A RETURN0.
            ;1855 ;
            ;1856 ; IF THE BIT FOR THE PARTICULAR TRAP IS NOT SET IN R[0F], THE TRAP ROUTINE
            ;1857 ; READS THE ERROR REGISTERS, SAVES THEM FOR TYPEOUT, AND MAKES AN ERROR CALL
            ;1858 ; TO THE CONSOLE.
            ;1859 ;
            ;1860 ;-

;3072 ;*****************************************************************
;3073 ;**
;3074 ;
;3075 ; VERIFY THE MULTIPLIER ROMS
;3076 ;
;3077 ; TEST DESCRIPTION
;3078 ;
;3079 ; THIS TEST PERFORMS A MULTIPLY DOUBLE WITH OPERANDS
;3080 ; THAT WILL COMPLETELY VERIFY THE MULTILPIER ROMS.
;3081 ;
;3082 ; TEST SEQUENCE   DESCRIPTION
;3083 ; 1  GENERATE MULTIPLICAND
;3084 ; 2  FETCH THE MULTIPLIER
;3085 ; 3  PERFORM THE MULTIPLY
;3086 ; 4  VERIFY RESULTS
;3087 ;
;3088 ; FPA UCODE USED
